DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-97, drawn to a method of encrypting the data using a key from the content of data item to store the data item at a location associated with a digital fingerprint, classified in class 713, subclass 150.
 - II. Claims 98-114, 117-119, drawn to a method for storing data item by associating data item with each of access authorization credentials, classified in class 707, subclass 9.
 - III. Claims 115-116, drawn to a method for transferring data item using a low-speed connection from the client to the repository, which connected to the network over a higher speed than the client, the data item is executing by an application for returning to the client across the lower speed connection, classified in class 709, subclass 233.
 - IV. Claims 120-121, drawn to a method for data transfer regulating by transmitting the fragment to repository after determining, comparing a digital fingerprint of each fragment with digital fingerprints of data item in the repository, classified in class 709, subclass 232.
 - V. Claims 122-127, drawn to a method for rearranging a sequence of bit string by dividing the bit string into segments and transforming disjoint

groups of homologous bits using a state permutation operation, classified in class 712, subclass 300.

- VI. Claims 128-153, drawn to a method for selling a backup services by accepting an unlimited amount of backup data, storing the data for free or at a charge to cover the cost of operating the backup services and charging a fee greater than the fee charged for accepting the data for recovery the data from the repositories, classified in class 705, subclass 404.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I-VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, Group I is a method for encrypting the data using a key from the content of data item to store the data item at a location associated with a digital fingerprint, Group II is a method for storing data item by associating data item with each of access authorization credentials, Group III is a method for transferring data item using a low-speed connection from the client to the repository, which connected to the network over a higher speed than the client, the data item is executing by an application for returning to the client across the lower speed connection, Group IV is a method for rearranging a sequence of bit string by dividing the bit string into segments and transforming disjoint groups of homologous bits using a state permutation

operation, Group V is a method for selling a backup services by accepting an unlimited amount of backup data, storing the data for free or at a charge to cover the cost of operating the backup services and charging a fee greater than the fee charged for accepting the data for recovery the data from the repositories. See MPEP 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicants are advised that the reply to this requirement to be completed must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicants is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CR 1.48(b) and by the fee required under 37 CFR 1.17(i).
